Innovation Lab Internships

The Hatfield Innovation Lab (iLab) is offering two internships.

When: These internships start at the beginning of Winter term 2025 and run through the calendar year to the end of Fall term 2025.

Hours: Students will work 10 hours per week during academic terms and 40 hours per week during the summer term.

Pay: \$16/hour

Housing: Interns will be provided summer housing on the Hatfield campus in Newport, Oregon.

Summary: The iLab serves as the engineering center for the Hatfield Marine Science Center campus in Newport, Oregon.

In this internship, students will focus on the engineering and design associated with studying the marine world. A background in engineering is not a pre-requisite to the internship.

The pre-requisite for these internships is a desire to develop solutions for problems facing marine research and a broad desire to more deeply explore the marine world. The bulk of the internship will be focused on progressing an independent research/design project. Interns will also work on designing or manufacturing short-term projects that come through the lab during the internship.

These internships are sponsored in full by the Roundhouse Foundation.
