

State of the Robotics Program

Cindy Grimm
Professor & Robotics Program Director
Oregon State University

We'll start by introducing our faculty and the areas they work in, along with major new funded projects. The Robotics Graduate Student Association will also introduce themselves. This last year has seen changes in Graf, admissions, and the qualifying exam; I'll cover what's new and the cultural expectations that make our group here so unique.

Dr. Grimm started her research career in 3D graphics, creating novel methods for representing complex surfaces. She dabbled a bit in facial animation at Microsoft Research, then transitioned to Washington University in St. Louis where she pursued work in biomedical imaging, human-computer interaction, and art-based rendering. She moved to Oregon State University in 2012, and joined the Cool Kids club in robotics. She now works on agricultural robotics and dabbles in law and policy for robotics. She is also the current Graduate Director for the Robotics program.

FRIDAY
Sept 27
10-11AM

Covell Hall 221
FREE
Refreshments Served
